

# Harmonizing Mitigation Activities with National Inventories for Effective NDC Tracking

Experience and Lessons Learned from  
Government of Colombia and USAID RALI

Amanda Valenta (USAID)  
Marian Van Pelt and Derina Man (USAID RALI)  
Sebastian Carranza and Camila Rodriguez (Colombia MADS)

July 18, 2018

The Leadership Compact, a partner program of the LEDs GP, is a partnership of 12 countries that are leaders in advancing economic development through low carbon solutions. The Leadership Compact focuses technical support on design and implementation of policies, measures, and actions that enable Compact countries to unlock private investment and business partnerships to achieve these priority climate and development goals.

Partner countries include Colombia, Mexico, Peru, Jamaica, Vietnam, Kazakhstan, Senegal, Ghana, Sierra Leone, Malawi, Kenya and Morocco.

*Disclaimer: The LEDs GP does not endorse or recommend specific products or services. Information provided in this webinar is featured on the LEDs GP website as one of many best practices resources reviewed and selected by technical experts. Please note that this webinar will be recorded and uploaded to [ledsgp.org](http://ledsgp.org) within a week of the webinar.*

- Introduction to RALI project

USAID Resources to Advance LEDS Implementation (USAID RALI)

# INTRODUCTIONS

- Supports technically rigorous development and implementation of Low Emission Development Strategies or LEDS
- Focus on providing tools and technical assistance to USAID and developing country partners

# Who We Are: RALI Activities

## CLEAN ENERGY EMISSION REDUCTION TOOL

### Projected GHG Emission Reductions <sup>1</sup>

Years	Projected Emission Reductions (tCO <sub>2</sub> e)
2017 - 2020	373,077.27
2021 - 2025	455,949.52
2026 - 2030	444,664.20
Total GHGs Reduced/Avoided from 2017 - 2030	1,273,690.99

### Projected GHG Emission Reductions by Action

## Clean Energy Emission Reduction (CLEER) Tool

## NDC Implementation Support

## Technical Assistance and Best Practices

# RALI's Engagement in Colombia

- 18-month engagement
  - (January 2017 to June 2018)
- Working closely with:
  - Ministry of Environment and Sustainable Development (MADS)
  - Institute of Hydrology, Meteorology, and Environmental Studies (IDEAM)
  - USAID Colombia
  - Other local stakeholders
- Engagement included:
  - Technical analysis
  - Technology development
  - Harmonization pilot projects
  - Capacity building and global knowledge sharing

Top to Bottom: LAC LEDS Workshop in Mexico City; COP23 in Bonn, Germany; Closing mission in Bogota, Colombia

The Challenge

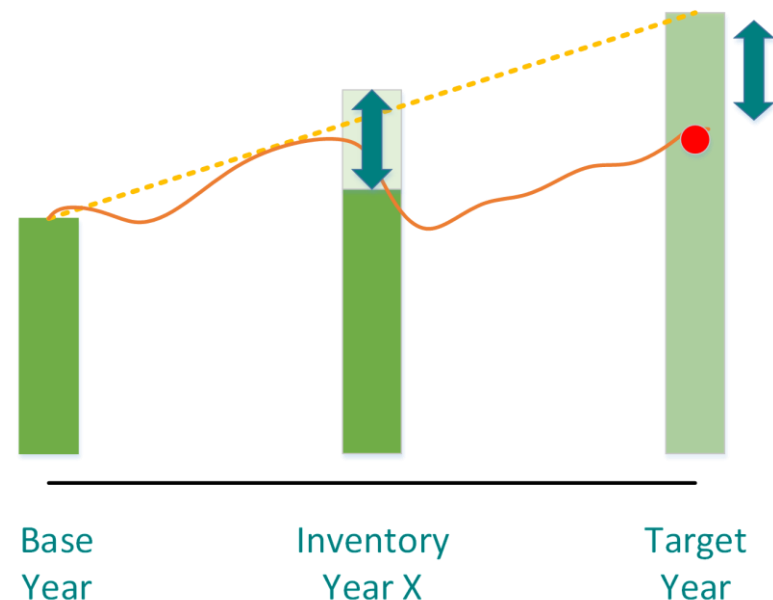

# Transparency Needs Under the Paris Agreement

- The Paris Agreement requires countries to set increasingly ambitious emissions targets (NDCs)
- Meeting these targets requires an established measurement, reporting, and verification (MRV) system for GHG emissions
- NDC targets will require bottom-up sectorial compliance data for national programs

Exact MRV requirements under the Paris Agreement are still under development, but the agreement calls for countries to track progress in achieving NDCs, which will require an established MRV system

# How do Mitigation Efforts Impact UNFCCC Emission Reporting?

- Many countries have committed to reductions relative to BAU
- National inventories will likely show increasing emissions
- Mitigation activities should show emission reductions
- Countries need to harmonize mitigation MRV with the national emission inventory/BUR process
- Having a central system to aggregate data can drastically improve the GHG inventory process and harmonization of data

## Country perspective: Colombia

# National climate change system - SISCLIMA

**MADS:** Ministry of Environment and Sustainable Development

**DNP:** National Planning Department

**MFA:** Ministry of Foreign Affairs

**IDEAM:** National Institute of Hydrology, Meteorology and Environmental Studies

# Implementing the Paris Agreement in Colombia

## COLOMBIA: MITIGATION GOAL

### Unilateral and unconditional target

Colombia commits to reduce its greenhouse gas emissions by 20% with respect to the projected Business as Usual scenario (BAU) by 2030.

### Conditional Target

Subject to the provision of international support, Colombia could reduce its greenhouse gas emissions by 30% with respect to BAU by 2030.

# From Kioto to París

## MRV – Project approach:

1. Emissions
2. Reductions
3. Financing
4. MRV - M&E

## MRV Principles:

Continuous improvements, flexibility, environmental integrity and efficiency.

## Information management for the Paris Agreement

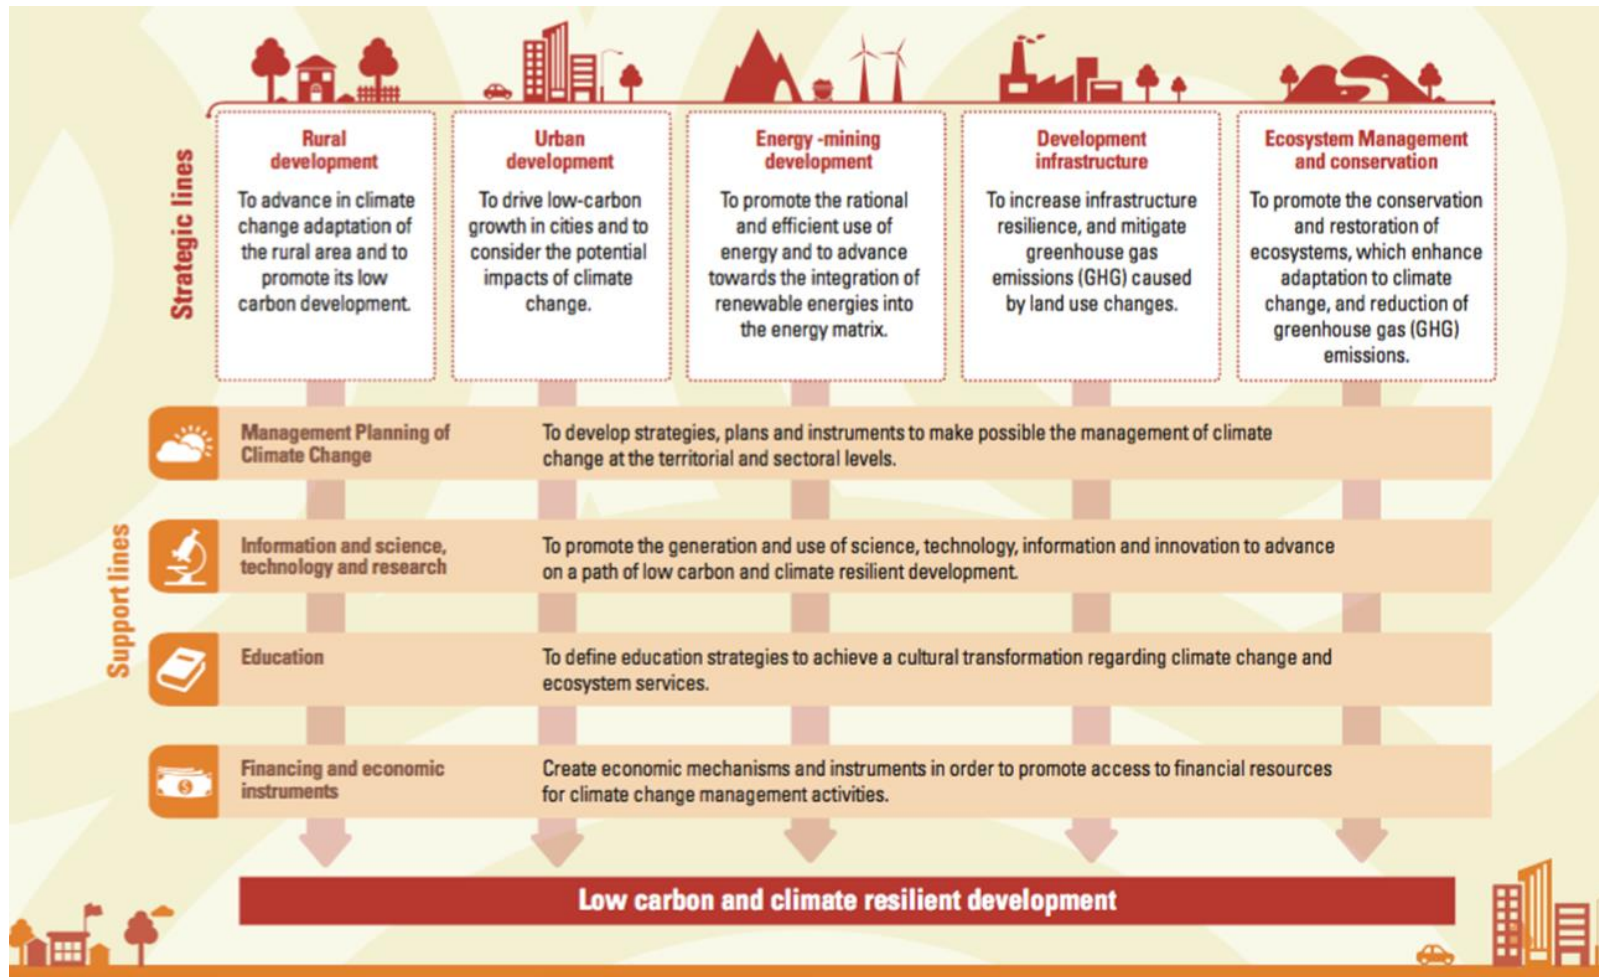

1. NDC tracking and mitigation goals accomplishment.
2. Climate change policies performance tracking.
3. NDC goals in mitigation and adaptation.

## Transparency Framework for the Paris Agreement

- Accounting rules
- Legal framework
- Technological tools

## Law 1753/2015 "National Development Plan"

The Ministries of Finance; Agriculture and Rural Development; Mines and Energy; Transport; Health and Social Protection; Housing, City and Territory; and Trade, Industry and Tourism must formulate and implement **sectoral plans for adaptation** to climate change, and **sectoral action plans** of the Colombian Low Carbon Development Strategy, which will contain **quantitative sectoral GHG** reduction targets for short (2020) and medium term (2025 or 2030).

## Institutional articulation SISCLIMA (Decree 298/2016)

## Marian Van Pelt

### RALI Project Manager

[marian.vanpelt@icf.com](mailto:marian.vanpelt@icf.com)

# Overview of RALI/Colombia Activities

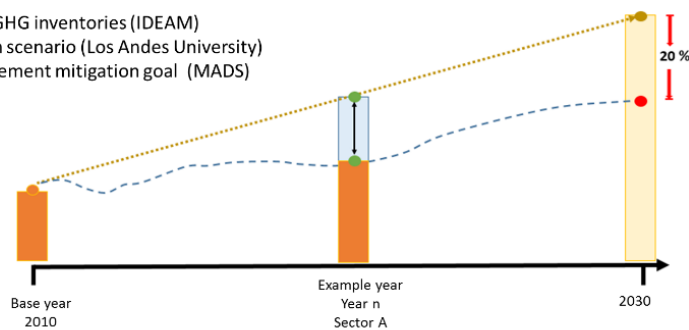

# RALI's Approach in Colombia

## Harmonize MRV

Ensure that reported inventory GHG emissions to the UNFCCC reflect MRV actions that have taken place

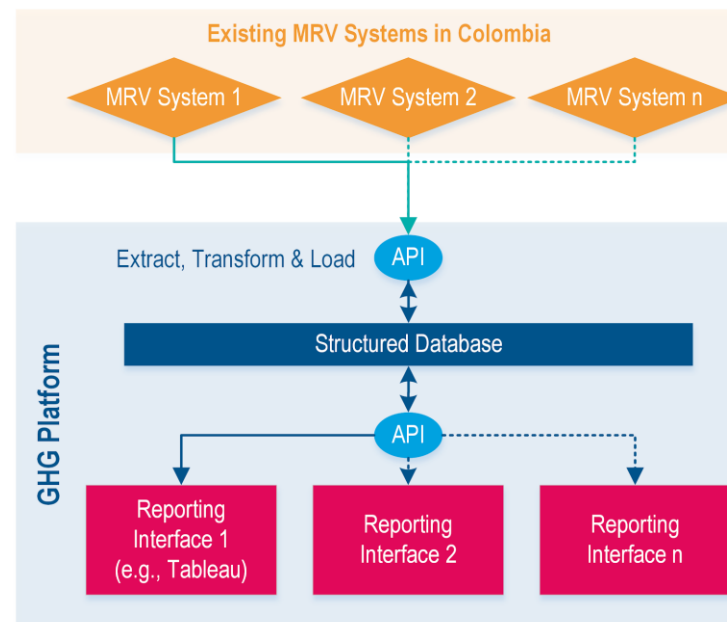

- National GHG inventories (IDEAM)
- Mitigation scenario (Los Andes University)
- Paris agreement mitigation goal (MADS)

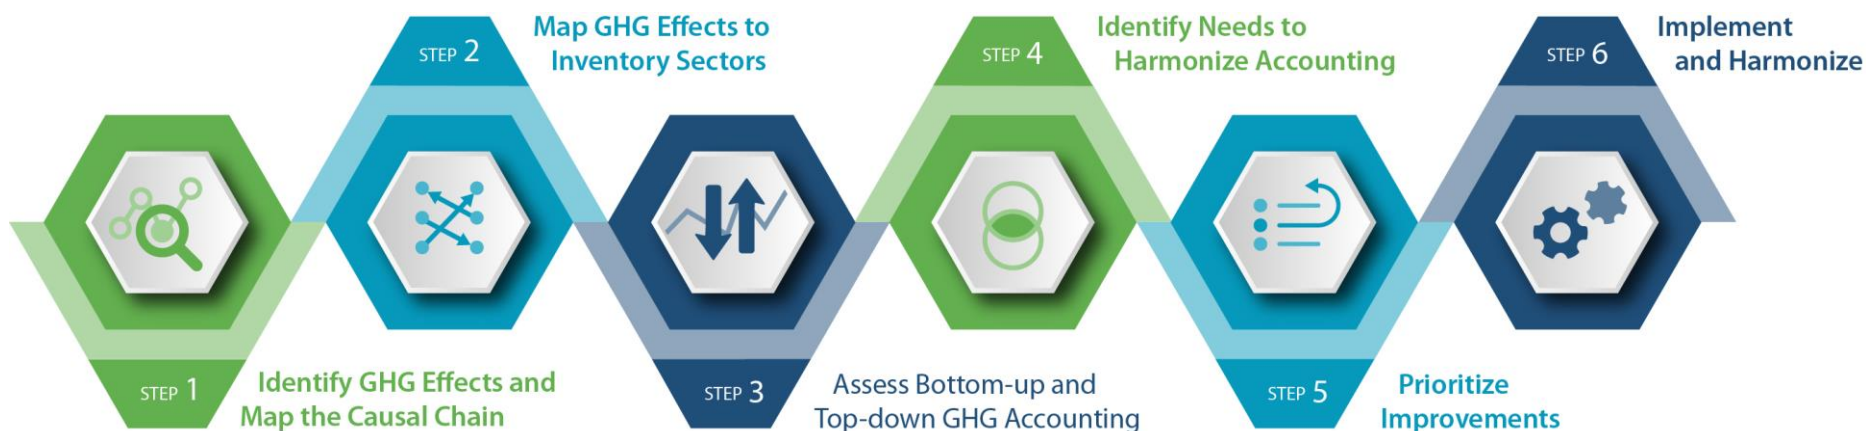

## Build SINGEI Prototype

Position IDEAM to efficiently prepare biennial inventories through increased automation

The USAID RALI project developed a six-step framework that countries can use to guide the harmonization of data from mitigation activities with the national GHG inventory.

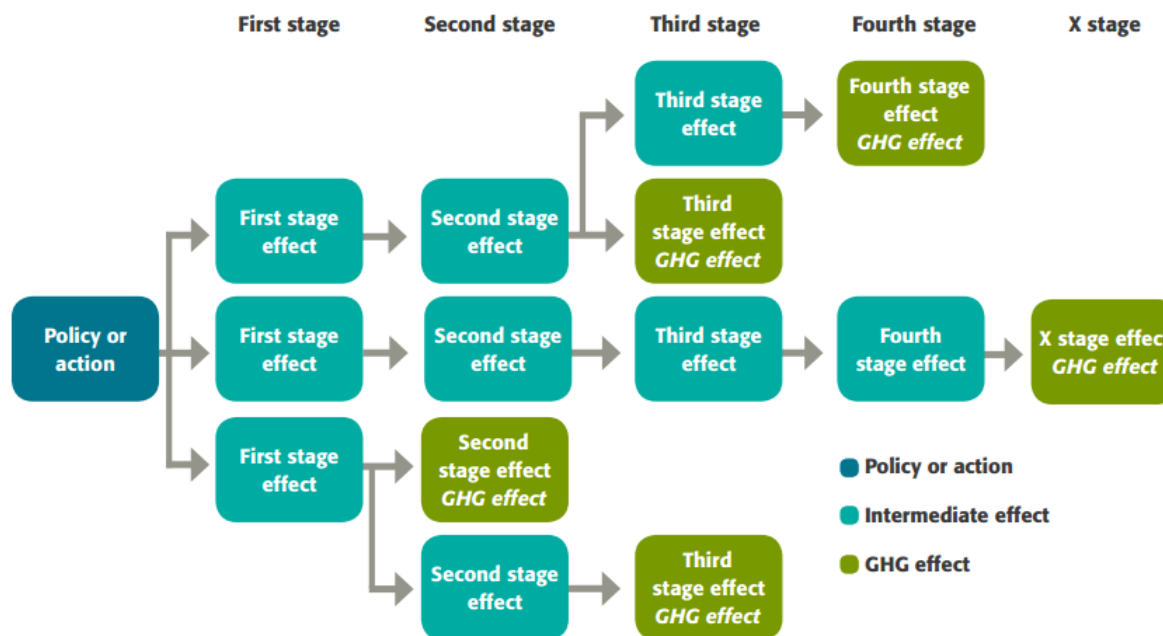

# Step I: Identify and Map GHG Effects

- Define the mitigation policy or action
- Map the causal chain of the policy outcomes and GHG effects

Source: GHG Protocol's *Policy and Action Standard*

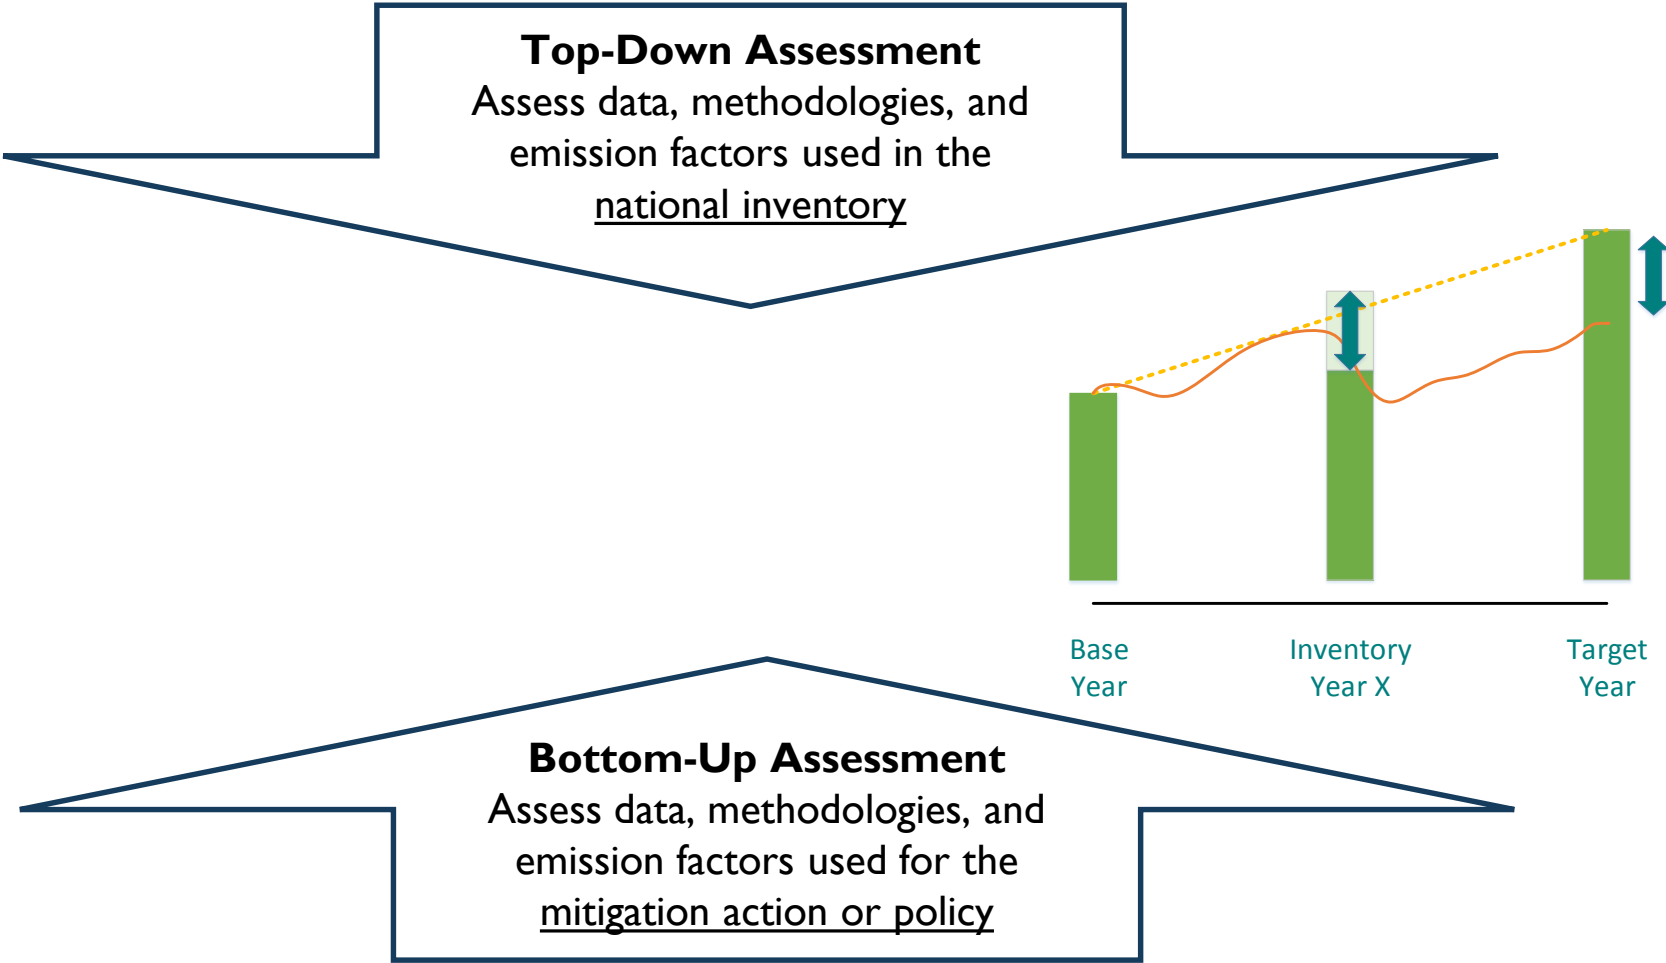

## Step 2: Map GHG Effects to Inventory

- Map GHG impacts from mitigation activity to standardized sectors and source categories from IPCC
- Identify which drivers of GHG emissions will be impacted by mitigation activity
  - E.g., “Activity will reduce fuel oil consumed in the residential sector”

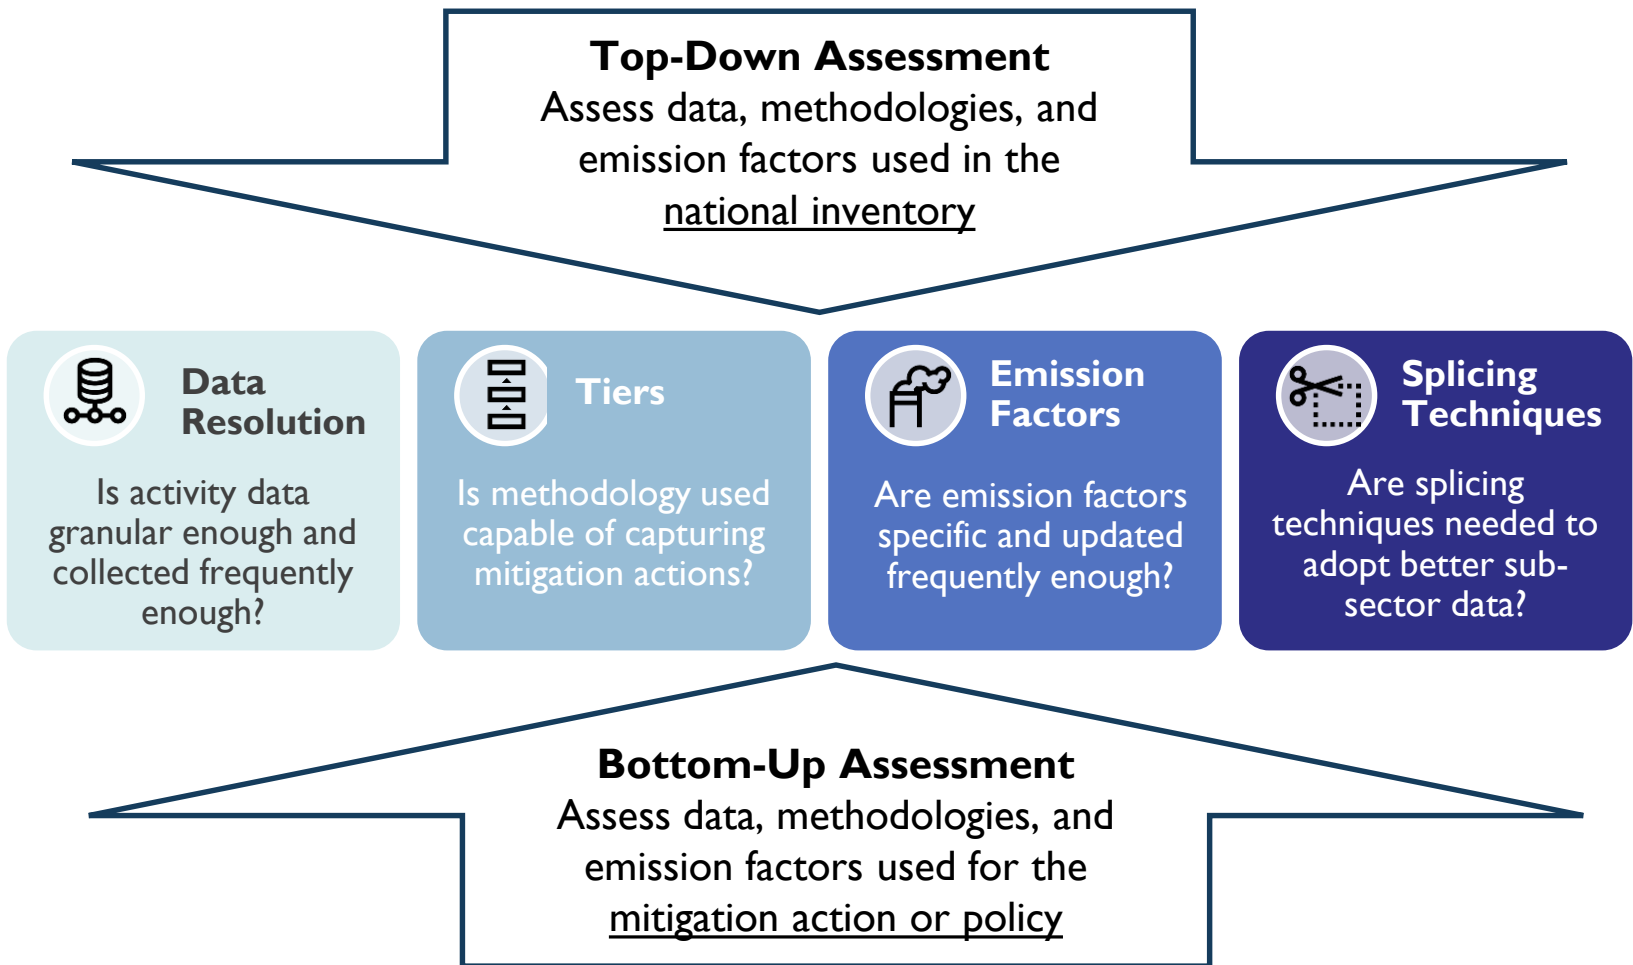

# Step 3: Bottom-Up / Top-Down MRV

## Step 4: Identify Needs to Harmonize

## Step 5: Prioritize Improvements

Prioritize improvements to inventory or mitigation activity MRV using a decision framework. Example:

**Highest priority:** AFOLU expected to play significant role in reaching NDC target

**Middle priority:** Energy results in significant emissions but projects are not yet defined

**Lowest priority:** Transportation already collects robust information annually at the municipal level

## Step 6: Implement and Harmonize

Work with project implementers, agencies, and other key stakeholders to modify current inventory and mitigation MRV systems to address gaps.

This could include:

- Defining additional data requirements
- Institutional arrangements
- Frequency/rigor of data collection
- Improving Tier of inventory methodologies
- Splicing subnational data with national data
